TEV Series

VALVE REGULATED LEAD-ACID BATTERIES

TEV

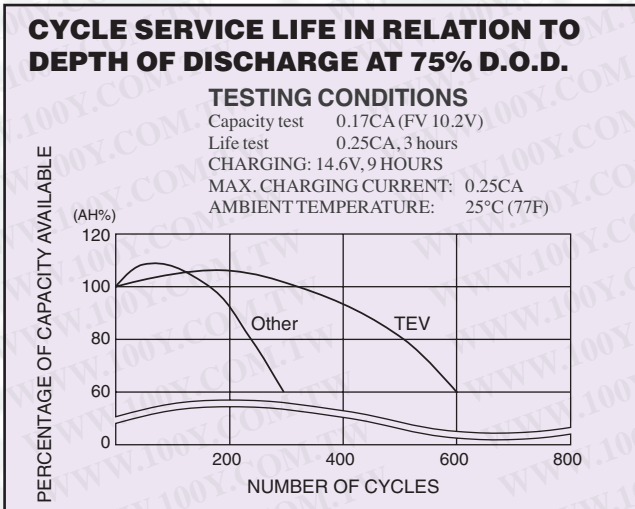

TEV HIGH CAPACITY CYCLIC VRLA BATTERIES

The low maintenance and valve regulated constructions combine with heavy-duty plates and unique separator systems to make TEV service twice as long as conventional counterparts.

FEATURES

1. Double cycle life

TEV operates 500 charge/discharge cycles or twice as many cycles as conventional cycle use batteries at 75% D.O.D. (depth of discharge).

2. Valve-regulated and maintenance-free

Battery electrolyte retained solidly in the separator and the innovative gas recombinant system allows minimum gas emittance freeing the user from maintenance.

3. Durability for deep discharge use

Yuasa's state-of-the-art plate barrier prevention and the unique separator systems help ensure deep discharge use thus considerably prolonging battery's service life.

4. Minimal self-discharge

Cyclic use batteries tend to be left discharged after usage causing plate corrosion leading to shortened life. Self discharge rate of TEV is as small as only 0.1% a day at 20°C and thus extends the storage period allowed.

5. Higher capacity with same footprint as standard cyclic batteries
