

# Overvoltage Protection with USB Charger Detection, LDO, and ESD Protection on D+/D-

## General Description

The MAX14529E/MAX14530E are overvoltage-protection devices with USB charger detection, a low-dropout (LDO) regulator, and ESD protection. These devices feature a low  $35\text{m}\Omega$  (typ)  $R_{\text{ON}}$  internal FET switch and protect low-voltage systems against voltage faults up to 28V. When the input voltage exceeds the overvoltage threshold, the internal FET switch is turned off to prevent damage to the protected components.

The charger detection detects a short between the USB D+ and D- data lines. If the data lines are shorted together and a dedicated charger is attached, the phone draws more than 500mA to charge the battery.

The overvoltage thresholds (OVLO) are preset to 5.75V (MAX14529E) or 6.8V (MAX14530E).

The LDO output (LOUT) is powered from OUT and supplies 3.3V to the USB transceiver. The LDO features a 100mA (min) current capability and low output noise.

The MAX14529E/MAX14530E feature  $\pm 15\text{kV}$  HBM ESD protection with low (3pF) capacitance suitable for Hi-Speed USB 2.0.

Both devices are offered in a small 12-bump, 1.5mm x 2mm WLP package and operate over the  $-40^\circ\text{C}$  to  $+85^\circ\text{C}$  extended temperature range.

## Applications

Cell Phones  
 MP3 Players  
 PDAs and Palmtop Devices

## Typical Operating Circuit

## Features

- ◆ Input Voltage Protection Up to 28V
- ◆ High-Current USB Charger Detection
- ◆ 3.3V, 100mA LDO
- ◆ Preset Overvoltage Protection Trip Level  
5.75V (MAX14529E)  
6.8V (MAX14530E)
- ◆ Integrated Low  $R_{\text{ON}}$   $35\text{m}\Omega$  (typ) FET Switch
- ◆ Low-Capacitance USB High-Speed Data Line ESD Protection (3pF)  
 $\pm 15\text{kV}$  Human Body Model (HBM)  
 $\pm 15\text{kV}$  IEC 61000-4-2 Air Gap  
 $\pm 8\text{kV}$  IEC 61000-4-2 Contact
- ◆ Thermal-Shutdown Protection
- ◆ 12-Bump, 1.5mm x 2mm WLP Package
- ◆  $-40^\circ\text{C}$  to  $+85^\circ\text{C}$  Operating Temperature Range

## Ordering Information/ Selector Guide

| PART           | PIN-PACKAGE | TOP MARK | OVLO (V) |
|----------------|-------------|----------|----------|
| MAX14529EEWC+T | 12 WLP      | AAP      | 5.75     |
| MAX14530EEWC+T | 12 WLP      | AAQ      | 6.8      |

**Note:** Both devices are specified over the  $-40^\circ\text{C}$  to  $+85^\circ\text{C}$  operating temperature range.

+ Denotes a lead(Pb)-free/RoHS-compliant package.

T = Tape and reel.

## Pin Configuration

# Overvoltage Protection with USB Charger Detection, LDO, and ESD Protection on D+/D-

## ABSOLUTE MAXIMUM RATINGS

IN to GND .....-0.3V to +30V  
 OUT to GND .....-0.3V to min (+12V, IN + 0.3V)  
 OEN, LEN, VOK, CDET to GND .....-0.3V to +6V  
 LOUT to GND .....-0.3V to +6V  
 Continuous Current IN to OUT per Ball.....1.74A  
 Continuous Power Dissipation ( $T_A = +70^\circ\text{C}$ )  
 12-Bump WLP (derate 8.5mW/ $^\circ\text{C}$  above  $+70^\circ\text{C}$ ).....678mW

Junction-to-Ambient Thermal Resistance ( $\theta_{JA}$ )  
 (Note 1) .....118 $^\circ\text{C}/\text{W}$   
 Operating Temperature Range .....-40 $^\circ\text{C}$  to +85 $^\circ\text{C}$   
 Junction Temperature .....-40 $^\circ\text{C}$  to +150 $^\circ\text{C}$   
 Storage Temperature Range .....-65 $^\circ\text{C}$  to +150 $^\circ\text{C}$   
 Lead Temperature (soldering, 10s) .....+300 $^\circ\text{C}$

**Note 1:** Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, go to [www.maxim-ic.com/thermal-tutorial](http://www.maxim-ic.com/thermal-tutorial).

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ELECTRICAL CHARACTERISTICS

( $V_{IN} = 2.2\text{V}$  to  $28\text{V}$ ,  $T_A = T_{MIN}$  to  $T_{MAX}$ , unless otherwise noted. Typical values are at  $V_{IN} = +5\text{V}$ ,  $T_A = +25^\circ\text{C}$ .) (Note 2)

## Pin Description

| PIN    | NAME                     | FUNCTION                                                                                                                                                                                                                        |
|--------|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A1, A2 | IN                       | Overvoltage-Protection Input. Bypass IN with a 1 $\mu$ F ceramic capacitor as close as possible to the device to obtain $\pm 15$ kV HBM ESD protection. No capacitor required to obtain $\pm 2$ kV HBM ESD protection.          |
| A3     | $\overline{\text{VOK}}$  | Voltage Input Good Open-Drain Output. $\overline{\text{VOK}}$ is low impedance when $\overline{\text{OEN}}$ is driven low after the debounce time is expired ( $2.2\text{V} < \text{V}_{\text{IN}} < \text{V}_{\text{OVLO}}$ ). |
| A4     | D-                       | USB Data Line with ESD Protection                                                                                                                                                                                               |
| B1     | $\overline{\text{OEN}}$  | Overvoltage Protection Active-Low Enable Input. Drive $\overline{\text{OEN}}$ high to disconnect OUT from IN.                                                                                                                   |
| B2     | $\overline{\text{LEN}}$  | Low-Dropout Active-Low Enable Input.                                                                                                                                                                                            |
| B3     | $\overline{\text{CDET}}$ | Charger Detection Open-Drain Output. $\overline{\text{CDET}}$ is low if D+ and D- are shorted.                                                                                                                                  |
| B4     | GND                      | Ground                                                                                                                                                                                                                          |
| C1, C2 | OUT                      | Overvoltage Switch Output. Bypass OUT with a 0.1 $\mu$ F ceramic capacitor as close as possible to the device.                                                                                                                  |
| C3     | LOUT                     | Low-Dropout Power Output. Bypass LOUT with a 1 $\mu$ F ceramic capacitor as close as possible to the device.                                                                                                                    |
| C4     | D+                       | USB Data Line with ESD Protection                                                                                                                                                                                               |

MAX14529E/MAX14530E

Figure 1. MAX14529E/MAX14530E Timing Diagram

**MAX14529E/MAX14530E**

### ***Detailed Description***

The MAX14529E/MAX14530E are overvoltage-protection devices with USB charger detection, a low-dropout (LDO) regulator, and ESD protection. These devices feature a low  $R_{ON}$  internal FET switch and protect low-voltage systems against voltage faults up to 28V. When

the input voltage exceeds the overvoltage threshold, the internal FET switch is turned off to prevent damage to the protected components. The 20ms debounce time prevents false turn-on of the internal FET switch during startup.

### Functional Diagram

# Overvoltage Protection with USB Charger Detection, LDO, and ESD Protection on D+/D-

## Device Operation

The MAX14529E/MAX14530E have an internal oscillator and charge pump that control the turn-on of the internal FET switch. The internal oscillator controls the timers that enable the turn-on of the charge pump and controls the state of the open-drain  $\overline{\text{VOK}}$  output. If  $V_{\text{IN}} > V_{\text{OVLO}}$ , the internal oscillator remains off, thus disabling the charge pump. If  $2.2\text{V} < V_{\text{IN}} < V_{\text{OVLO}}$ , the internal charge pump is enabled. The charge-pump turns on the internal FET switch and asserts  $\overline{\text{VOK}}$ . At any time, if  $V_{\text{IN}}$  drops below 2.2V or rises above  $V_{\text{OVLO}}$ ,  $\overline{\text{VOK}}$  goes high and the charge pump is disabled, disconnecting OUT from IN.

## Overvoltage Lockout (OVLO)

The MAX14529E has a 5.75V (typ) overvoltage threshold (OVLO), while the MAX14530E has a 6.8V (typ) OVLO.

## Low Dropout

The low-dropout regulator (LOUT) is powered from input voltage and supplies 3.3V (typ) to the USB transceiver. If a lithium-ion (Li+) battery is used to power the USB transceiver, a boost converter is needed. The LDO features a minimum 100mA current capability and low output noise. Drive  $\overline{\text{LEN}}$  high to disable the LDO.

## Charger Detection

The charger detection detects if there is a short between the USB D+ and D- data lines. If the data lines are shorted together and a dedicated charger is attached, the phone draws more than 500mA to charge the battery;  $\overline{\text{CDET}}$  asserts low. If the data lines are not biased properly, then an unidentified device is present and the phone draws no more than 500mA or does not charge at all, depending on its USB compliance level.

## Thermal-Shutdown Protection

The MAX14529E/MAX14530E feature thermal-shutdown circuitry. The internal switch turns off when the junction temperature exceeds +150°C (typ) and immediately goes into a fault mode. The device exits thermal shutdown after the junction temperature cools by 20°C (typ).

## Applications Information

### IN Bypass Capacitor

Bypass IN to GND with a 1 $\mu\text{F}$  ceramic capacitor as close as possible to the device for  $\pm 15\text{kV}$  HBM ESD protection on IN. No capacitor required to obtain  $\pm 2\text{kV}$  HBM protection. If the power source has significant

inductance due to long lead length, take care to prevent overshoots due to the LC tank circuit and provide protection.

## ESD Test Conditions

ESD performance depends on a number of conditions. The MAX14529E/MAX14530E are specified for  $\pm 15\text{kV}$  HBM typical ESD protection on the D+, D-, and IN pins when IN is bypassed to ground with a 1 $\mu\text{F}$  ceramic capacitor.

## Human Body Model

Figure 2 shows the Human Body Model, and Figure 3 shows the current waveform it generates when discharged into a low impedance. This model consists of a 100pF capacitor charged to the ESD voltage of interest that is then discharged into the device through a 1.5k $\Omega$  resistor.

Figure 3. Human Body Current Waveform

# Overvoltage Protection with USB Charger Detection, LDO, and ESD Protection on D+/D-

## IEC 61000-4-2

The IEC 61000-4-2 standard covers ESD testing and performance of finished equipment. It does not specifically refer to integrated circuits. The MAX14529E/MAX14530E are specified for  $\pm 15\text{kV}$  Air-Gap Discharge and  $\pm 8\text{kV}$  Contact Discharge IEC 61000-4-2 on the D+ and D- pins.

The main difference between tests done using the Human Body Model and IEC 61000-4-2 is higher peak current in IEC 61000-4-2. Because series resistance is

lower in the IEC 61000-4-2 ESD test model (Figure 4), the ESD-withstand voltage measured to this standard is generally lower than that measured using the Human Body Model. Figure 5 shows the current waveform for the  $\pm 8\text{kV}$  IEC 61000-4-2 Level 4 ESD Contact Discharge test. The Air-Gap Discharge test involves approaching the device with a charged probe. The Contact Discharge method connects the probe to the device before the probe is energized.
