## 304沉头内六角

铬元素和镍元素的结合作用在材料表面生成一层抗氧化耐磨、防锈、防腐蚀。  
Chromium and nickel elements combined effect generated in the material surface layer of the oxidation resistance, abrasion resistance

1.

## 标准内六角

Standard cross groove, the installation process is not easy to appear pits  
is phenomenon, greatly saves installation time

采用优质304不锈钢，六角槽深度、规格均为标准  
不锈钢材质防锈耐腐蚀。

Choose the optimum and the most beautiful one, according to the actual situation  
The whole design process is not just the technology

## 螺旋螺纹

Standard cross groove, the installation process is not easy to appear pits  
is phenomenon, greatly saves installation time

2.

螺纹清晰，截面光滑平整，无毛刺  
无缺牙现象，有更好的紧固效果。

Screw section is smooth round off, without burr, mislead rotation  
The process is not easy to miss
