### ■ 內容簡介

For undergraduate students in Computer Science and Computer Programming courses.

Now in its Tenth Edition, Concepts of Programming Languages introduces students to the main constructs of contemporary programming languages and provides the tools needed to critically evaluate existing and future programming languages. Readers gain a solid foundation for

understanding the fundamental concepts of programming languages through the author's presentation of design issues for various language constructs, the examination of the design choices for these constructs in some of the most common languages, and critical comparison of the design alternatives. In addition, Sebesta strives to prepare the reader for the study of compiler design by providing an in-depth discussion of programming language structures, presenting a formal method of describing syntax, and introducing approaches to lexical and syntactic analysis.

## ■ 目錄

Ch1: Preliminaries

Ch2: Evolution of the Major Programming Languages

Ch3: Describing Syntax and Semantics

Ch4: Lexical and Syntax Analysis

Ch5: Names, Bindings, and Scopes

Ch6: Data Types

Ch7: Expressions and Assignment Statements

Ch8: Statement-Level Control Structures

Ch9: Subprograms

Ch10: Implementing Subprograms

Ch11: Abstract Data Types and Encapsulation Constructs

Ch12: Support for Object-Oriented Programming

Ch13: Concurrency

Ch14: Exception Handling and Event Handling

Ch15: Functional Programming Languages

Ch16: Logic Programming Languages
