

## Reactor

### AC reactor

FR-HAL ALL

An AC reactor connected on the input side of the inverter improves power factor and reduces harmonic currents on the input side.

#### ● Specifications

Type FR-HAL-□□	200V	400V
		0.4K to 110K *1
Power factor improvement effect *2	Power factor 88% or more (at 100% load)	
Vibration	5.9m/s <sup>2</sup> or less	H110K or less : 5.9m/s <sup>2</sup> or less H185K or more : 2.9m/s <sup>2</sup> or less
Installation procedure	(H)55K or less : horizontal plane installation or vertical plane installation (H)75K or more : horizontal plane installation	

FR-HAL

- \*1 Refer to the type in the table of outline dimension drawing for details of capacity.
- \*2 Power factor stated above is the value when considering the power supply impedance is 1%. The value changes according to the power supply capacity and power supply impedance. The load is considered as 100% when the fundamental current value specified in JEM-TR201 is 100%. The power factor improving effect is slightly lower when the motor below 0.4kW is used.

#### ● Selection

- Make selection according to the applicable motor capacity. (When the inverter capacity is larger than the motor capacity, make selection according to the motor capacity.)
- When the inverter is connected under a large-capacity power transformer (1000kVA or more transformer) or when a power capacitor is to be switched over, an excessive peak current may flow in the power input circuit, damaging the inverter. Be sure to install an AC reactor in such a case.

					H355K	330	325	340	80
					H560K	450	540	635	190

### DC reactor

FR-HEL ALL

A DC reactor connected on the DC side of the inverter improves power factor and reduces harmonic currents on the input side.

#### ● Specifications

Type FR-HEL-□□	200V	400V
		0.4K to 55K *1
Power factor improvement effect *2	Power factor 93% or more (at 100% load)	
Vibration	5.9m/s <sup>2</sup> or less	
Installation procedure	Horizontal plane installation or vertical plane installation	

FR-HEL

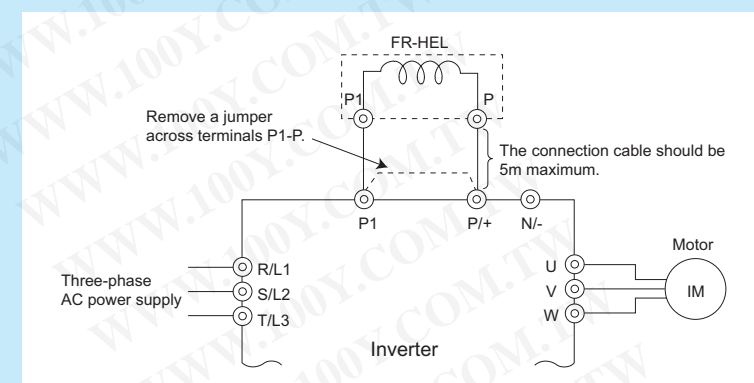

- \*1 Refer to the type in the table of outline dimension drawing for details of capacity.
- \*2 Power factor stated above is the value when considering the power supply impedance is 1%. The value changes according to the power supply capacity and power supply impedance. The load is considered as 100% when the fundamental current value specified in JEM-TR201 is 100%. The power factor improving effect is slightly lower when the motor below 0.4kW is used.
- \*3 A DC reactor is enclosed with the inverter of 75K or more, be sure to connect the reactor to the inverter.

#### ● Selection

- Make selection according to the applicable motor capacity. (When the inverter capacity is larger than the motor capacity, make selection according to the motor capacity.)

#### ● Connection diagram

- Connect the reactor to terminal P1 and P of the inverter. Make sure to remove a jumper across terminal P1-P before connecting. (A failure to do so will produce no power factor improving effect.)
- The wiring length between the reactor and inverter should be 5m maximum and minimized.
