DS14C89A/DS14C89AT Quad CMOS Receiver

General Description

The DS14C89A/DS14C89AT, pin-for-pin compatible to the DS1489A/MC1489A, are receivers designed to interface data terminal equipment (DTE) with data circuit-terminating equipment (DCE). These devices translate levels conforming to EIA-232E and CCITT V.28 standards to TTL/CMOS logic levels.

The device is fabricated in low threshold CMOS metal gate technology. The device provides very low power consumption compared to their bipolar equivalents: 900 μ A (DS14C89A) versus 26 mA (DS1489A).

The DS14C89A/DS14C89AT provide on chip noise filtering which eliminates the need for external response control filter capacitors. When replacing the DS1489A with the DS14C89A/DS14C89AT, the response control filter pins can be tied high, low, or not connected.

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the devices should be operated at these limits. The tables of "Electrical Characteristics" specify conditions for device operation.

Note 2: Derate N Package 12.1 mW/°C, J Package 12.9 mW/°C, and M Package 8.5 mW/°C above +25°C.

Note 3: AC input waveforms for test purposes: t_r = t_f = 200 ns, V_{IH} = +3V, V_{IL} = −3V, f = 20 KHz.

Note 4: Under the power-off supply conditions it is assumed that the power supply potential drops to zero (0V) and is replaced by a low impedance or short circuit to ground.
