Dual D-type flip-flop

HEF4013B
 flip-flops

DESCRIPTION

The HEF4013B is a dual D-type flip-flop which features independent set direct (S_D), clear direct (C_D), clock inputs (CP) and outputs (O, \bar{O}). Data is accepted when CP is LOW and transferred to the output on the positive-going edge of the clock. The active HIGH asynchronous clear-direct (C_D) and set-direct (S_D) are independent and override the D or CP inputs. The outputs are buffered for best system performance. Schmitt-trigger action in the clock input makes the circuit highly tolerant to slower clock rise and fall times.

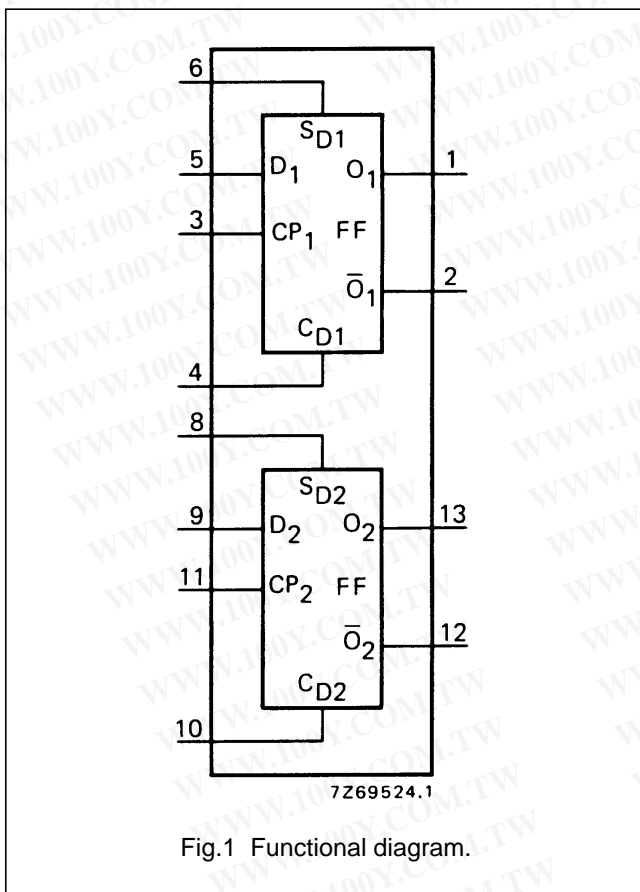

Fig.1 Functional diagram.

Fig.2 Pinning diagram.

FUNCTION TABLES

INPUTS				OUTPUTS	
S_D	C_D	CP	D	O	\bar{O}
H	L	X	X	H	L
L	H	X	X	L	H
H	H	X	X	H	H

INPUTS				OUTPUTS	
S_D	C_D	CP	D	O_{n+1}	\bar{O}_{n+1}
L	L		L	L	H
L	L		H	H	L

Notes

- H = HIGH state (the more positive voltage)
 L = LOW state (the less positive voltage)
 X = state is immaterial
 = positive-going transition
 O_{n+1} = state after clock positive transition

PINNING

- D data inputs
- CP clock input (L to H edge-triggered)
- S_D asynchronous set-direct input (active HIGH)
- C_D asynchronous clear-direct input (active HIGH)
- O true output
- \bar{O} complement output

APPLICATION INFORMATION

Some examples of applications for the HEF4013B are:

- Counters/dividers
- Registers
- Toggle flip-flops

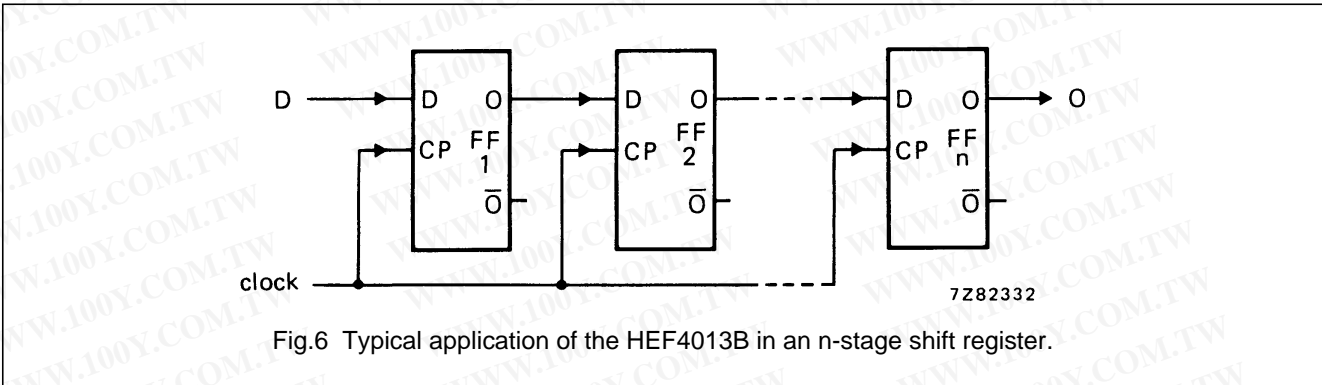

Fig.6 Typical application of the HEF4013B in an n-stage shift register.

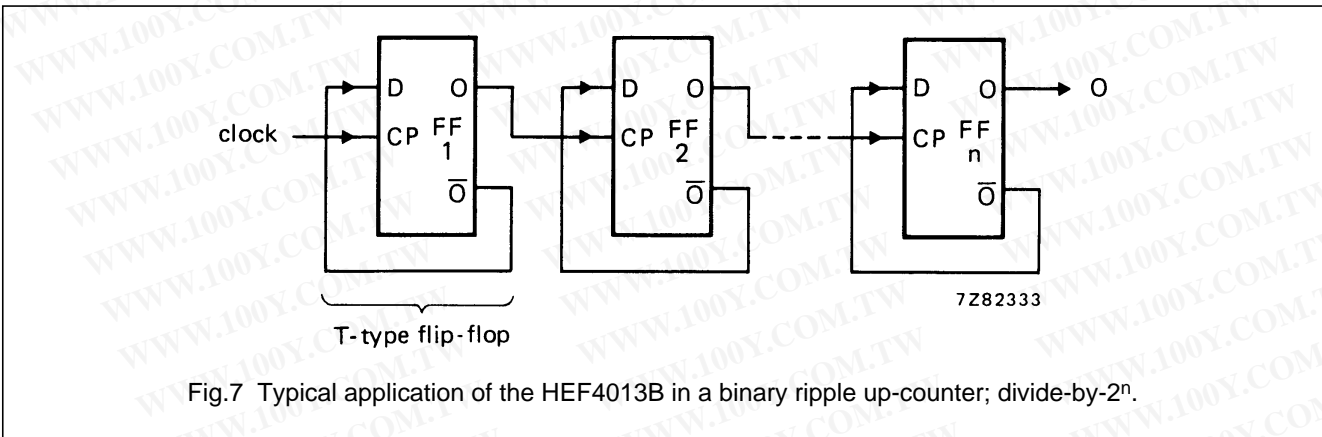

Fig.7 Typical application of the HEF4013B in a binary ripple up-counter; divide-by-2ⁿ.

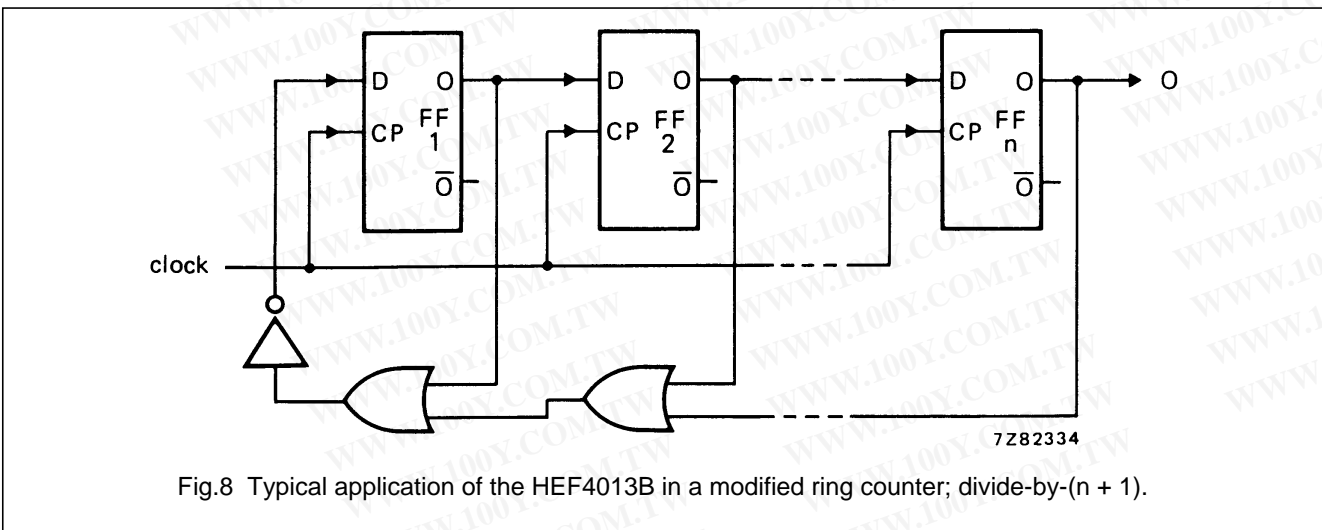

Fig.8 Typical application of the HEF4013B in a modified ring counter; divide-by-(n + 1).
